LUIS GUSTAVO DE MELO GOMES

MID-LEVEL FULL STACK DEVELOPER

SERRINHA – BA, BRAZIL

EMAIL: gomesluis.dev@gmail.com | LINKEDIN: www.linkedin.com/in/gomes-luis

PORTFOLIO: https://luisgomes-mu.vercel.app | GITHUB: https://github.com/luisgomes2002

I am a Full Stack developer with 3 years of experience, focused mainly on the backend. In recent years I have worked with **React**, **React Native** with **TypeScript** for frontend and **mobile**, and **Node.js**, **Express**, with **TypeScript**, **Java**, **SpringBoot** on the backend.

PROFESSIONAL EXPERIENCE

Sep 2024 - Present · **ZTHA Computação - Web and Mobile Developer**

1. Lead developer of Ecosys, a management platform for agricultural cooperatives with a web admin dashboard, an API and a mobile app for producers to sell their products. The backend uses **Java** with **Spring Boot**, **PostgreSQL**, **Redis**, **Flyway** for migrations, **JWT** authentication, rate limiting with **Bucket4j**, **MapStruct** and **AspectJ**, and runs on **Docker**. The web app is built with **React** and **TypeScript**, **Recharts** and **Leaflet**, and the mobile app with **React Native** and **Expo**. I am implementing the migration of the API to **CQRS** with **Event Sourcing**: an **event store** in **PostgreSQL** keeps the full history of animals, plants, products and the financial ledger, events are published with **Debezium** and **Kafka**, read screens are served from projections in **MongoDB** and analytics from **ClickHouse**

2. Development of the API for Caderneta Digital, a digital credit union fintech offering accounts, loans, investments and cards. The API is built with

Java, **Spring Boot** and **PostgreSQL**, structured as a **modular monolith** with **Clean Architecture**. I also contributed to the mobile app built with **React Native** and **Expo**.

3. Development of the API and front end of ZTHA Acessos, an internal portal for requesting, approving and granting access to credentials and repositories, with full revocation on offboarding and an auditable history. It uses **Express**, **Prisma** and **PostgreSQL** on the backend, **Next.js** with **Tailwind CSS** on the front end, and **Docker**.

4. Development of the centralized authentication app for the **Ztha** ecosystem in **React Native** with **TypeScript**, featuring **2FA (TOTP)**, biometrics and QR Code scanning. I also contributed to the API built with **Node.js** with **Fastify**, **Prisma ORM**, **PostgreSQL**, **JWT** and data validation with **Zod**.

Side Projects

1. **(Live in production)** Murasaki Languages, a Japanese study platform. The frontend uses **React** and **Vite** with **TypeScript**, with **Zod** for validation. The backend uses **Java Spring Boot** following **Clean Architecture**, with **MongoDB** for persistence and **Redis** for caching. The application features OCR with **Google Vision AI**, payments with **Stripe** and storage on **Google Cloud Storage**. The infrastructure uses **NGINX** and **Docker**, with monitoring via **Prometheus** and **Grafana**, and deployment through **CI/CD**. I am also building a **Chrome extension** integrated with the platform that tracks immersion time spent watching YouTube videos.

2. **(Live in production)** Freelance project for Hotel Ellus: a desktop hotel management system with modules for reservations, rooms, guests, reports and auditing. Built with **Electron**, **React** with **TypeScript**, **SQLite**, **Zustand**, **Zod**, **React Hook Form** and **TanStack Table**.

3. **(Live in production)** Sagyou, an open-source personal organization app that works offline on desktop and mobile. The desktop app uses **Electron**, **React**, **TypeScript** and **SQLite**, and the Android app uses **React Native** with **Expo**. Sync goes through a server on **Cloudflare Workers** with **D1** and uses **end-to-end encryption**, so the server never sees the content. For security, devices are paired via **QR Code** and protected with **2FA (TOTP)** and **biometrics**. The app also integrates **AI agents** via **MCP** and **uses** an **ESP32** with **Wake-on-LAN** to turn on the PC from the phone.

EDUCATION

B.Sc. in Computer Engineering, 2025 – UNIFACS

ADDITIONAL TRAINING

• Java Certification – Java10x

• Spring Boot Certification – Java10x

LANGUAGES

• Portuguese: Native

• English: Intermediate

• Japanese: Intermediate

• Korean: Basic
